6.6 Summary of Test Results/Plots

The dwell time within a 31.6 second period in data mode is independent from the packet type (packet length). The calculation for a 31.6 second period is as follows:

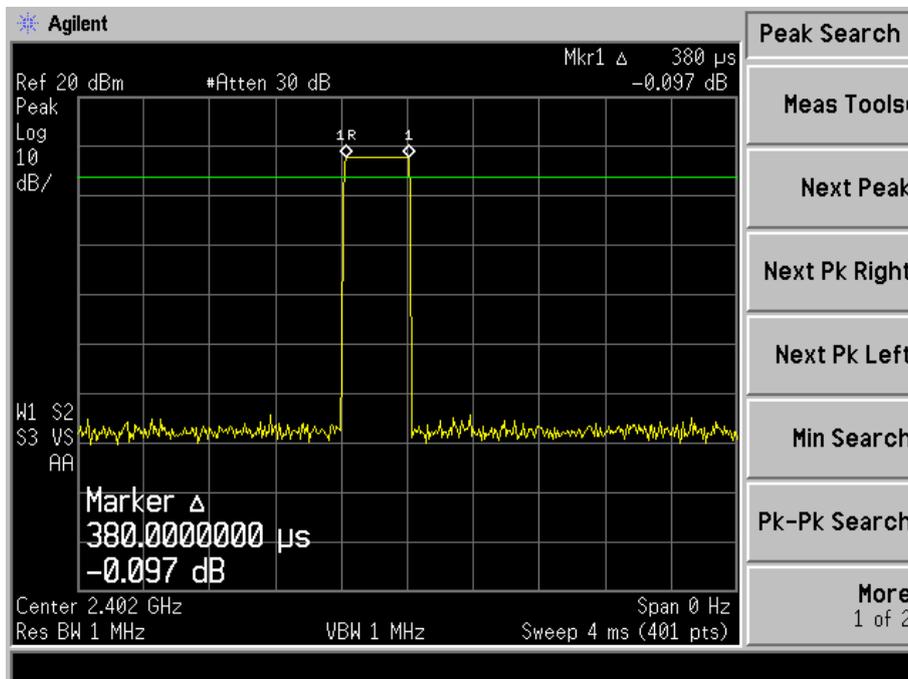

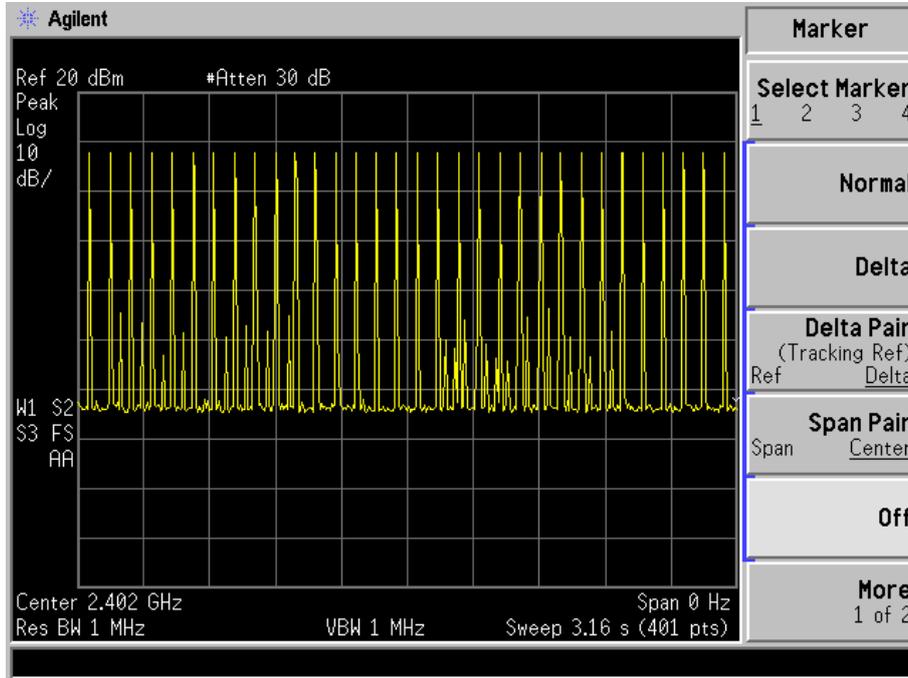

$$\text{Dwell time} = \text{time slot length} * \text{quantity of pulse} / \text{test period} * 31.6\text{s}$$

Test data is corrected with the worse case, which the packet length is GFSK and 8DPSK Mode.
